Resume

I work in the development of microservices (Rest API restful using FastAPI), using IBM's own database. Carrying out small repairs to APIs, developing features, endpoints according to the requirements passed in each process. Also working with code refactoring in projects within the company, I started working with reports and dashboards to help teams within IBM that would be in high demand, so I could get involved in something new to learn and have more involvement in tasks and also in meetings multicultural, actively participating in meetings in English, both mentoring and standup, daily and retrospectives.

Professional Experience

jan 2023 - Present System Developer, IBM

- Maintenance on Python APIs RestFul using framework Fastapi, making adjustments and improvements as required.
- Implementation of changes requested by stakeholders, particularly for the frontend layer using Javascript with React.
- Changing large mass of files with python using Regex.
- Update and maintenance of applications in the Cirrus environment.
- Active participation in daily meetings to review the task backlog on Jira.
- Regular update of the status of assigned tasks, ensuring transparency and effective communication.

nov 2021 - dez 2022 System developer internship, IBM (Part-time)

- Development of small portions of code using Python.
- Development of queries for extracting and retrieving data from relational database using python with framework pandas.
- Development of scripts for automating basic processes of code versioning tools (e.g., GitHub).
- Development of language modules/classes and object-oriented programming using python.
- Participation in meetings to decide technical solutions for future implementation via webex and consulting Jira.

Education

ago 2023 - Present Technologist, Impacta university

I study in the second semester of the systems development analysis course, having done projects this semester that linked the subjects between web development, object-oriented programming, SQL language, and also with the software engineering class to understand the beginning of a project, its artifacts and conversations to understand the customer before putting your hands on the code itself.

ago 2016 - dez 2019 Bachelor, Estácio

Carrying out an integrative Project study, and additional hours.

Activities and groups: Every semester we do projects to specialize the subjects.
